Open Schools for Open Societies

This publication has been funded with support from the European Commission under the Grant Agreement Number 741572

The Open Schools for Open Societies project (OSOS) provides innovative ways to explore the world: not simply to automate processes but to inspire, to engage and to connect. It will also support the development of innovative and creative projects and other educational activities.

There has been a great deal of research into and discussion about education. In the last few years, there was growing consensus that the traditional and knowledge-based form of education was insufficient to prepare learners for the increasingly complex society in the 21st century. This has to do with a changing society: ICT has become very important, organizations need to be more flexible and they are asking for more flexible employees, knowledge outdates much faster, and also traditional jobs are replaced by jobs as yet unknown.

Schools need to change their way of education accordingly: not only does learning take place in school, but also outside school. Subjects are not only taught independently of each other, but are integrated into each other within a project.

Businesses have a vital role in the learning process of children. It is their chance to learn about the changing demands from our society and learn how to work together as a team, use the knowledge that they have acquired and work together as a team. And perhaps most of all:

The Open Schools for Open Societies project will support your school to implement Open Schooling

Inspiring projects that schools can implement to become open communities of learning
