Open Schools for Open Societies

European Commission

Open Schools for Open Societies

The Open Schools for Open Societies project (OSOS) provides innovative ways to explore the world: not simply to automate processes but to inspire, to engage and to connect. It will also support the development of innovative and creative projects and other educational activities.

We believe it is essential to capture your imagination and curiosity from the start of your education: we aim to introduce real life problems and complex concepts with projects designed to engage your inventiveness and creativity, while at the same time building a solid foundation in critical 21st-century skills.

An open school is a more engaging environment for learning and makes a vital contribution to the community: student projects meet real needs in the community outside school and draw upon local expertise and experience. This is really important, as you have the opportunity not only to transfer your knowledge but also to express it in a different context by creating your own projects and proposing your own solutions.

Furthermore, our objective is that you'll develop positive attitudes, and especially trust in the norms, values and rules as well as

The Open Schools for Open Societies project will support your school to implement Open Schooling

Inspiring projects that schools can implement to become

open communities of learning

The OSOS model that enables schools to become Open

Schools and redefine their role in their communities

The OSOS community of 1000 Open Schools

Inspiring projects

The OSOS inspiring projects are examples of Open Schools. Each project will act as an accelerator for the introduction of the Open School approach in the participating schools. They will help innovative schools to proceed more and develop their innovative ideas to new localised projects that could provide new

The OSOS model

The OSOS Open Schooling Model provides a powerful framework for school leaders to engage, discuss and explore how their schools need to evolve, transform and reinvent; how schools will facilitate open, more effective and efficient co-design, co-creation, and use of educational content (both from formal and informal providers), tools and services for personalized science learning and teaching; how

1000 Schools

The OSOS project will allow and guid teachers to participate in our communities. These communities will be based on the activities and the content that each community implements, uses and publishes and allows teachers to organize their groups or classrooms in terms of students and content, learning scenarios and
